INTRODUCTION

The bibliographies in this volume were developed as part of a workshop held in Las Vegas, Nevada in November, 1970. The workshop was for the purpose of outlining the contents of a general education course for college students called Man and Environment. Development of this course was first begun at a previous workshop held in Denver, Colorado in June, 1970. Altogether some twenty colleges have participated in the development of this course and its related bibliographies.

The over-all objective of the course Man and Environment is to have students recognize man's interdependence with his environment and his responsibility for it. The course is adisciplinary in its approach. It is written in modular form, and, as a result, the bibliographies are also categorized according to the modules which make up the course.

Further information about this course Man and Environment may be obtained from the National Association for Environmental Education, 11011 S.W. 104 St., Miami, Florida 33156.

USE OF THESE BIBLIOGRAPHIES

Since a number of these topics are very closely related to each other, persons using these bibliographies will find that books and articles under more than one module may relate to any subject under consideration or study. It should also be noted that there are general references at the end of this book which do not duplicate the module listings and which may apply to any subject under study.
